Welcome to Railinc Messaging Console

System Overview

The Railinc Messaging Console (RMC) is a web-based application that enables customers to view their messages that are sent and received through the Railinc network, retrieve information about their message routing configurations and usage patterns, and look up information about trading partners. All functions can be performed from the application menu bar on most pages ([Exhibit 2](#)).

The Railinc Message Console (RMC) allows *authorized* external users to:

- [Search and retrieve messages from inbound \(to Railinc\) or outbound \(from Railinc\) logs.](#)
- [Download and retransmit messages.](#)
- [View Railinc Messaging System \(RMS\) message routing.](#)
- [Drill-down on aggregated \(hourly\) message statistics.](#)
- [Set up notifications. Alerts are sent to users when selected criteria are met.](#) For example, alerts can be sent when no SWETA/SW421 messages have been received within the last hour.

Railinc Contacts

The Railinc Customer Success Center provides reliable, timely and high-level support for Railinc customers. Representatives are available to answer calls and respond to e-mails from 7:00 a.m. to 7:00 p.m. Eastern time, Monday through Friday, and provide on-call support via pager for all other hours to ensure support 24 hours a day, 7 days a week.

Contact us toll-free by phone at (877) RAILINC (1-877-724-5462) or send an e-mail directly to csc@railinc.com.

General User Interface and System Requirements

General user interface information (typical keyboard selection equivalents and shortcuts), as well as system requirements are available in the [Railinc UI Dictionary](#).

RMC Interface

Each page in a Railinc web application has the same structure.

Exhibit 1. RMC Page Layout

- 1 **Logo**—Railinc logo. Logo is link to the Railinc corporate website.
- 2 **Application Title**—Name of the application. This is also a link to the Home page of the application.
- 3 **User ID**—Logged in user.
- 4 **Company**—Company user is representing. For individuals representing several roads. Selecting this link while logged on opens the Select Company page, to reselect the company on whose behalf the user will be working—without logging out.
- 5 **Launch Pad**—Link where the user can click to go directly to the SSO Launch pad, or hover over to display a dual drop-down menu to switch to other authorized Railinc applications (left side) or go to the SSO User Services functions (right side), e.g., change passwords, request other applications, etc.
- 6 **Contact Us**—Opens a page of contact information (local road, Railinc support).
- 7 **Sign Out**—Logs out of current application and returns to the Railinc SSO login page.

- 8 Application Menu**—The top of the Railinc page displays the application menu options. The options on this menu allow you to perform the various functions of the application.
- 9 Page Title**—The title of the specific application task page.
- 10 Message Area**—Area under the page title which displays messages as needed (shown outlined with blue dashes). Also found here are breadcrumb navigation links, allowing users to quickly return to previously viewed screens.
- 11 Page content area**—The area of the page where tasks are executed (shown outlined with red dashes). These vary and may include a number of different elements, which are described in the next sections.
- 12 Legal Links**—This area at the bottom left of each page contains links to applicable legal notices, privacy rights, terms of service, and the Contact Us link.
- 13 Copyright**—This area at the bottom right of each page shows copyright information.

RMC Application Menu

[Exhibit 2](#) shows the RMC application menu.

Exhibit 2. RMC Application Menu

The RMC application menu provides the following functions:

Exhibit 3. RMC Application Menu Functions

Menu Item	Function
Messages	Opens the Messages menu (Exhibit 6).
Monitoring	Opens the Monitoring menu (Exhibit 34).
Routing	Opens the Routing menu (Exhibit 43).
Tools	Opens the Tools menu (Exhibit 47).
Help	Opens the Help menu (Exhibit 55).

Getting Started

The RMC application is accessed using the Railinc Single Sign On (SSO), which can be accessed from the Railinc portal at <http://www.railinc.com>. The SSO log in is located at the upper right of the page. Refer to [Register to Use Railinc SSO](#) on page 4.

Register to Use Railinc SSO

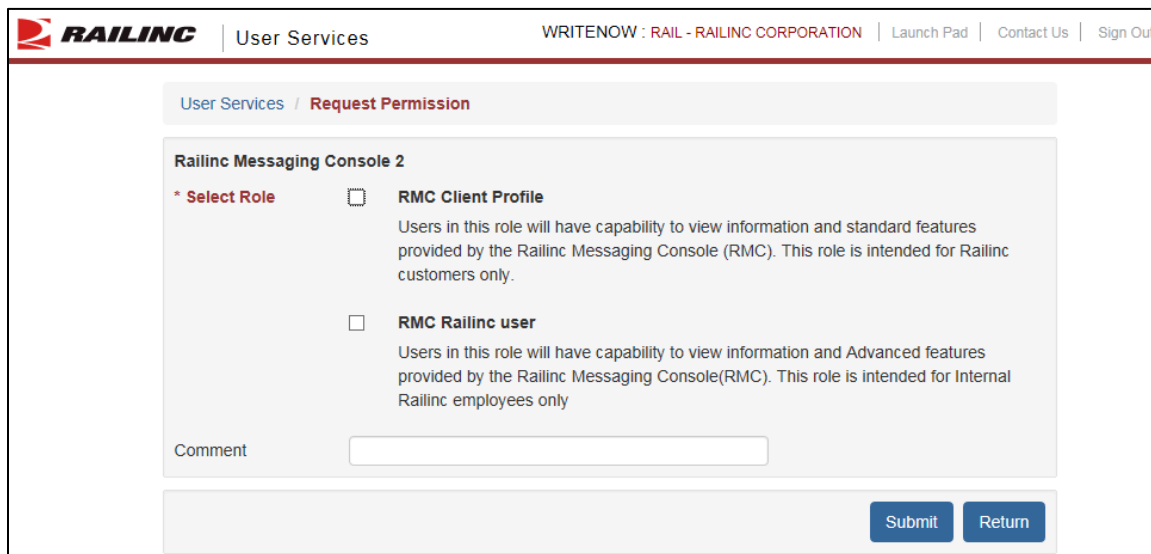

Each RMC user must register to use Railinc Single Sign On. It is beyond the scope of this document to describe the use of Railinc Single Sign On. Refer to [Railinc SSO and Launch Pad User Guide](#). This User Guide is available as a PDF download at www.railinc.com. Select the  icon in the Account Access window to view.

Once SSO registration is complete, the user must request access to RMC within SSO.

Requesting RMC Access

After authorization to use Railinc SSO is received, the user must request general access to RMC following instruction in the [Railinc SSO and Launch Pad User Guide](#).

Exhibit 4. SSO Request Permission to RMC

The screenshot shows the Railinc SSO interface for requesting RMC access. The header includes the Railinc logo, "User Services", and navigation links for "WRITENOW : RAIL - RAILINC CORPORATION", "Launch Pad", "Contact Us", and "Sign Out". The main content area is titled "Railinc Messaging Console 2" and contains a "Select Role" section with two radio button options: "RMC Client Profile" and "RMC Railinc user". Each option includes a description of the role's capabilities. Below the role selection is a "Comment" text input field. At the bottom right, there are "Submit" and "Return" buttons.

The user must select the RMC Client Profile role, enter an optional comment and **Submit** the request.

When e-mail notification of approved access to RMC is received, the user can log on and begin using RMC. Refer to [Logging In](#) on page 5.

Note: Access to functions for specific companies within RMC is handled by the Railinc RMC administrator who has the authorization to approve user's RMC tasks (and menu items). Other tasks can be performed by Railinc RMC administrators only.

Logging In

To log into RMC:

1. Open the browser.
2. Open the Railinc portal at <http://www.railinc.com>.
3. Log in to SSO. The Launch Pad is displayed.
4. Select **Railinc Messaging Console**. The RMC Search Messages page is displayed ([Exhibit 5](#)).

Exhibit 5. Search Messages

The screenshot displays the Railinc Messaging Console interface. At the top, the header includes the Railinc logo, the page title 'Railinc Messaging Console', and user information 'RMCEXTER : AF'. Navigation menus for 'Messages', 'Monitoring', 'Routing', 'Tools', and 'Help' are visible. The main content area is titled 'Search Messages' and is divided into several sections:

- Date & Time:** Fields for 'From' (10-05-2015 00:00:00), 'To' (10-05-2015 23:59:59), and 'Range' (Entire Day).
- Message Direction:** Radio buttons for 'Inbound (ILOG)' (selected) and 'Outbound (OLOG)', with a checkbox for 'Message with errors only'.
- Message Info:** Search criteria including 'Search By' (Header), 'Sender' (is exactly), 'Receiver' (is exactly), 'Sort' (Date&Time), and 'By'. It also includes fields for 'Message Type', 'Message Text', 'Control Number', 'Mailbag Number', and 'Terminal'.
- Bottom Section:** 'Previous Queries' dropdown, 'Query Name/Notes' input field, and 'Search' and 'Reset' buttons.

Note: If the user is authorized to act on behalf of more than one company, the Company Selection pop-up is displayed

5. The user can choose to execute a search, or select another menu item ([Exhibit 3](#)).

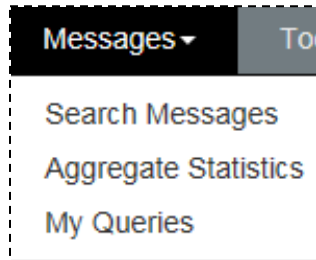

Logging Off

On any RMC page, select the **Sign Out** link at the upper right of the page. The Railinc SSO login page is displayed.

Messages

Here are descriptions of the processes to search and extract messages, as well as to view a message summary and performance statistics.

Exhibit 6. Messages Menu

[Exhibit 7](#) describes the tasks available on the Messages menu.

Exhibit 7. Messages Menu Items and Descriptions

Menu Item	Description
Search Messages	Allows the user to search for, and download messages.
Aggregate Statistics	Allows the user to access aggregated message statistics.
My Queries	Allows the user to view and reuse previous queries.

Search Messages

RMC provides the ability to search for messages transmitted through the Railinc Message Switch (RMS) using various search criteria. RMC also shows a summary of messages transmitted through RMS.

Note: To re-run a previously ran search, select it from the Previous Queries dropdown at the bottom of the page. The input fields will be filled with the previously specified parameters and can be re-run by selecting **Search**.

To search for messages.

1. On the navigation menu, select **Messages>Search Messages**. The Message Research page is displayed ([Exhibit 8](#)).

Exhibit 8. Search Messages

The screenshot shows the 'Search Messages' interface with the following sections:

- Date & Time:**
 - *From: 09-10-2015 [calendar icon] 00 : 00 : 00
 - *To: 09-10-2015 [calendar icon] 23 : 59 : 59
 - Range: Entire Day [dropdown]
- Message Direction:**
 - Inbound (ILOG) Message with errors only
 - Outbound (OLOG)
- Message Info:**
 - Search By: Header [dropdown]
 - Sender: is exactly [dropdown] [input] [Q]
 - Receiver: is exactly [dropdown] [input] [Q]
 - Sort By: Date&Time [dropdown] DESC ASC
 - Message Type: [input] [Q] Include [dropdown]
 - Message Text: [input]
 - Control Number: [input]
 - Mailbag Number: [input]
 - Terminal: [input]
- Footer:**
 - Previous Queries: [dropdown]
 - Query Name/Notes: [input] [Search] [Reset]

2. Complete the available Date/Time fields.

- **Date From/To***—Required fields. Use the available input fields to specify the start and end date and time for your message search parameters. If desired, use the calendar tool to select specific dates. Both fields default to today’s date. Limit is 14 days for queries.
- **Range**—Use the drop-down to select messages within a certain time range. Valid values include:

The dropdown menu lists the following options:

- Last hour
- Last 2 hours
- Last 3 hours
- Last 4 hours
- Last 5 hours
- Last 6 hours
- Last 7 hours
- Last 8 hours
- Last 9 hours
- Last 10 hours
- Last 11 hours
- Last 12 hours
- Entire day
- Early morning hours
- Late morning hours
- Afternoon
- Evening

This drop-down allows users to set the time range without having to enter two specific times. Values starting with “Last” end at the current time on the current day. The time range becomes *dynamic*, that is, times change when the user presses **Search** so the time range is current. Changing either the start or ending time makes the time range *static*. The rest of the values are static. Early morning is midnight to 6 AM, Late morning is 6 AM to noon, Afternoon is noon to 6 PM, and Evening is 6 PM to midnight. When a range is selected, the hours included are displayed in the time fields.

Note: The default range is entire day.

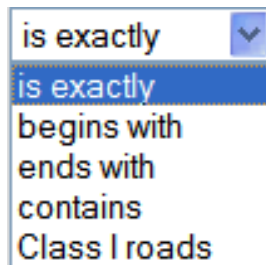

3. Select **Message Direction** options:

- **Inbound (ILOG)** — Look for inbound (to Railinc) messages (default).
- **Outbound (OLOG)**—Look for outbound (from Railinc) messages.
- **Messages with Errors only**—Select check box to only include messages with errors (applies to Inbound (to Railinc) messages only)

4. Select **Message Info** options:

- **Search By**—Select **Header** or **GS Header**. A **Header** refers to Interchange Control header, often called ISA header. Every header has a trailer. For an ISA header , the trailer is IEA. A **GS Header** refers to the header in the GS segment, called GS header. The trailer here is called GE. (see [Appendix A – Messaging Details](#) for details on message content).
- **Sender**—This can be any valid roadmark. Results include messages that were sent by the road. A Boolean operator can also be used for partially known roadmarks ([Exhibit 9](#)).

Exhibit 9. Sender/Receiver Boolean Operators

is exactly—the Sender/Receiver roadmark must exactly match the value specified (e.g., CSX will only find messages whose sending roadmark is exactly CSX).

begins with—the Sender/Receiver roadmark must begin with the value specified (e.g., CSX will find all messages whose sending roadmark starts with CSX, including CSXT).

ends with—the Sender/Receiver roadmark must end with the value specified (e.g., XT will find all messages whose sending roadmark ends with XT, including CSXT).

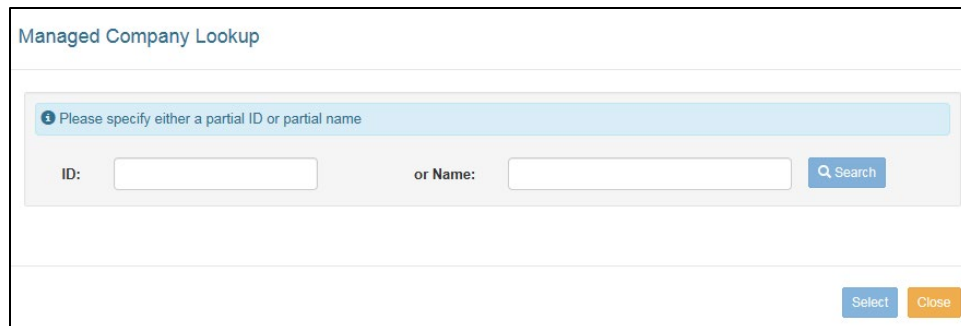

contains—the Sender/Receiver roadmark must contain the value specified (e.g., SX will find all messages whose sending roadmark contains SX including CSXT).

Class I roads—the Sender/Receiver roadmark must be a Class I railroad.

Note: Wildcards (using %, not *) are also allowed. Refer to Step [2.b](#) on page 34.

Select the lookup icon (🔍) to search for roadmarks ([Exhibit 10](#)).

Exhibit 10. Managed Company Lookup

Enter either an **ID** or the **Name** of the roadmark and select **Search**. Select one of the listed results to highlight it and then click the Select button or double-click a result to have that roadmark fill the field on the Search Messages page.

Receiver—This can be any valid roadmark. Results include messages that were received by the road. Use Boolean Operator as needed ([Exhibit 9](#)) or wildcards. Select the lookup icon (🔍) to search for roadmarks ([Exhibit 10](#)).

- **Sort By**—Select how the results will be sorted by default (date&time, Control Number, Sender, Receiver, Type, Length or Terminal). Select the DESC or ASC radio button to have the results sorted in either descending or ascending order based on the selected sort category.
- **Message Type**—This can be one or more valid message types, separated by commas. The search is not case sensitive and abbreviated types are allowed. For example, 'sw41' results in all messages whose message type start with 'SW41' including SW417, SW418, etc. Select the lookup icon (🔍) to search for a message type ([Exhibit 11](#)). Wildcards (using %, not *) are also allowed. Refer to Step [2.b](#) on page 34.

Exhibit 11. Message Type Lookup

Message Type Lookup

ID: 🔍 Search

	MessageType	Envelope	AlternateType	AlternateEnvelope	Desc
<input type="checkbox"/>	FA417	I	SWAYB00	T	RAIL CARRIER WAYBILL INTERCHANGE
<input type="checkbox"/>	SW417	I	SWAYB00	T	RAIL CARRIER WAYBILL INTERCHANGE

10
25
50
100

Select
Close

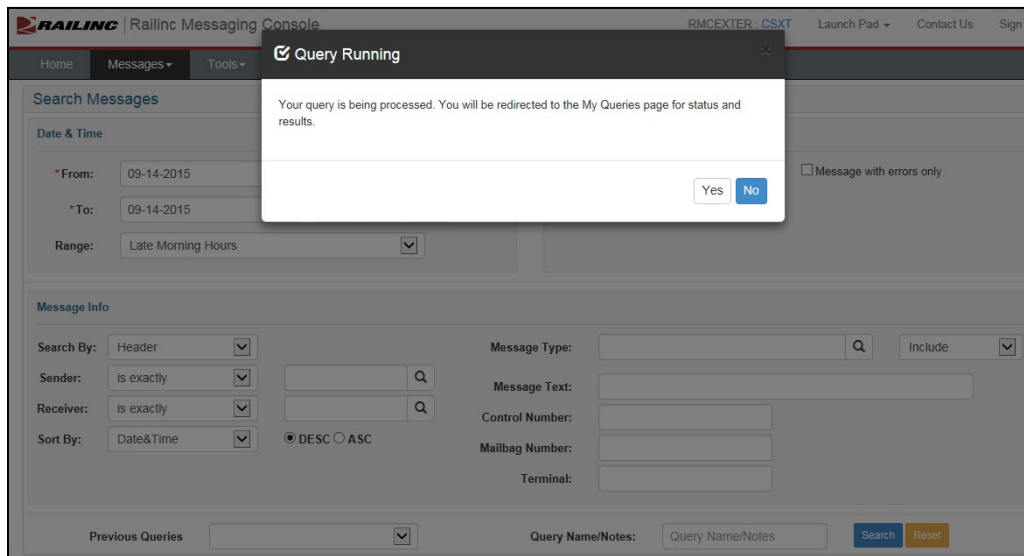

In this example, 417 was entered and two message types were listed after selecting **Search**.

Check the boxes for the message types wanted and select **Select**. The selected message types are included in the Message Type field. Use the dropdown to select to *include* or *exclude* the indicated message types.

- **Message Text**—This can be any text contained within the message, including the message payload. For example, it is possible to search for car initial and number using this field. Wildcards (using %, not *) are also allowed. Refer to Step [2.b](#) on page 34.
- **Control Number**—A valid TRAIN II or ISA control number as specified in the message header.
- **Mailbag Number**—A data set that consists of a header and trailer, actual EDI message data, and provides destination and processing information for an interconnected entity such as a VAN.

- **Terminal**—A unique ID assigned to a terminal inside of the messaging system which is used to route information between railroads. Following a successful search, details on the Terminal ID are available by scrolling over the Terminal ID column on the Search Results page ([Exhibit 15](#)).
5. Use the **Previous Queries** dropdown to pull up and re-run previously run queries. This will change any already entered query input field, other than then Range.
 6. Input a **Query Name/Notes** as a way to identify a query. This makes it easier to identify it if it needs to be re-run. Once ran, the query will appear with the given name in the Previous Queries drop-down.
Note: If a query if not given a specific name, it will be identified by default by the date and time that it has been processed.
 7. When all criteria have been set, select **Search**. A Query Running pop-up is displayed ([Exhibit 12](#)).

Exhibit 12. Search Messages (with Query Running pop-up)

8. Select **Yes** to clear the panel or wait until the query is finished. The user is automatically redirected to the Query List page ([Exhibit 13](#)).

Exhibit 13. My Queries/Query List (with query results)

Query List							
<input type="checkbox"/>	Query Name	From Date	To Date	Direction	Criteria	Results	Query Time

The latest/newest query is at the top of the list. Except for the checkbox at the left, the entire row is a link the user can select to view details of the search (**Note:** Queries with Count = 0 have no link.).

Note: Large queries can require more time to complete. *Processing* is displayed in the Result Count field of the My Queries page during that time. The refresh icon  can be selected in order to check on the completion of query processing; however, the screen will update automatically once the processing is complete.

- Navigate the results. If there are multiple pages of output records, page navigation links appear at the top and bottom of the results screen. Use the controls described in [Exhibit 14](#) to locate messages. The same navigation options also appear on the Search Results page ([Exhibit 15](#)).

Exhibit 14. Message Navigation Controls

	1	2	3	4	5	6	7	...	41		10	25	50	100
↑ Prev Page	↑ 1st Page	↑ Previous Pages		↑ Current Page	↑ Next Pages		↑ Last Page	↑ Next Page	↑ Change Number of Results Showing					

- Perform one of the following actions:

- a. **Duplicate:** Select a listed query and then **Duplicate** to redo/adjust a query. The Search Message page is displayed with the parameters of the selected query. As needed, modify the settings and rerun.
- b. **Delete:** Select a listed query and then **Delete** to remove that query from the list. A confirmation message is displayed. To confirm, select **Yes**. The selected query is deleted.
- c. To view details of a query, select a row with indicated query results. The Search Results page is displayed ([Exhibit 15](#)). The default number of messages displayed is 250.

11. A group of message selection buttons appear at the top of the page ([Exhibit 16](#)). Select messages for further message action buttons to appear ([Exhibit 17](#)). These links act against the currently shown page only.

Exhibit 16. Message Selection Buttons

Here is an overview of the message selection buttons ([Exhibit 16](#)):

All—Selects all messages on the currently shown page.

None—Deselects the entire list on the currently shown page.

Range—Use to select all messages between two individually selected messages on the currently shown page.

Invert—Reverses the existing selections (unchecked becomes checked, and checked becomes unchecked) on the currently shown page.

Exhibit 17. Message Action Buttons

Here is an overview of the message action buttons ([Exhibit 17](#)):

Retransmit—Retransmits selected messages on the currently shown page.

Download/Extract—Downloads selected messages on the currently shown page.

12. Perform one of the following actions:

- a. Select the **Content icon**  next to a displayed message to view the full content of that message. See [Viewing Messages](#) on page 14.
- b. Select the **Routing icon**  next to a displayed message to view the routing information for that message. See [Viewing Message Routing](#) on page 16.
- c. Select either the **Error icon**  or the **Warning icon**  next to messages with errors or warnings to view those errors or warnings. See [Viewing Errors](#) on page 16.
- d. Check one or more displayed messages and select **Download** to download the messages. Use the selection links ([Exhibit 16](#)) as appropriate. See [Downloading Messages](#) on page 17.
- e. An option is available to retransmit messages. Select one or more displayed messages (refer to [Exhibit 16](#)) and select **Retransmit** to retransmit the messages. Refer to [My Queries](#) on page 19.
- f. Select the **Transmission Summary** tab to view a summary of all returned messages ([Exhibit 18](#)).

Exhibit 18. Transmission Summary

Search Results						
Messages		Transmission Summary				
Export		Data displayed in transmission summary is grouped for all 37983 results matching your search criteria				Filter

10-06-2015	169110165	INBOUND	404	2	2519	

The results displayed on the Transmission Summary page can be exported. To do this, select the **Export** button. Transmission summary statistics are downloaded into Excel.

Viewing Messages

Here is how to view message content following a successful message search ([Exhibit 15](#)):

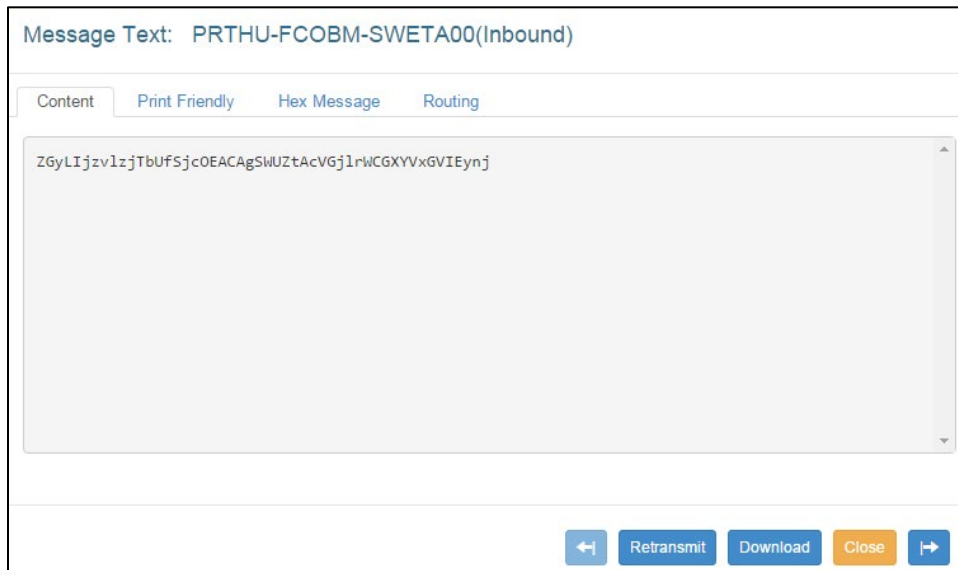

1. From the Search Results page ([Exhibit 15](#)) select the Content icon  next to a displayed message to view the full content of that message. The Message Text-Content panel opens ([Exhibit 19](#)).

Exhibit 19. Message Text (Content Tab)

2. Perform one of the following actions:
 - a. Select another tab to view other message data.
 - **Print Friendly**—to view the message in a print friendly format ([Exhibit 20](#)).
 - **Hex**—to view the transmitted message in hex format ([Exhibit 21](#)).
 - **Routing**—to view the routing history for the transmitted message ([Exhibit 22](#)). External users can see only one side (messages they sent or messages they received).
 - b. Use the **Previous**  or **Next**  button to view the next message details from the results list.
-
- Note:** The current tab selection is maintained when going to another message.
3. When finished viewing, select **Close** (or the **X**) to close the message text panel and return to the Search Results list ([Exhibit 15](#)).

Viewing Message Routing

To view message routing:

1. From the Search Results page ([Exhibit 15](#)) select the Route icon  next to a displayed message to view the view the routing information for that message. The Message Text panel opens (same as [Exhibit 22](#)).
2. View other tabs as needed, and when finished, select **Close**.

Viewing Errors

The system provides the ability to query messages that had errors. This includes viewing warnings and rejection information generated for the inbound (to Railinc) message.

To view error and warning messages:

1. Execute a successful search for messages that include errors (see Step 3 on page 8).
2. From the Search Results page ([Exhibit 15](#)) select either the Error icon  or the Warning icon  beside a message. The Message Text panel (Route tab) is displayed with the received errors displayed at the bottom.
3. Select **Close** to close the Message Text panel.

Downloading Messages

Messages can be downloaded as text files to either the local computer (PC) or to an FTP site. To download messages:

1. Following a successful search for messages, from the Search Results page ([Exhibit 15](#)), select one or more displayed messages (refer to Step 11 on page 12).
2. Select **Download/Extract**. The Extract Messages panel opens showing the selected messages ([Exhibit 23](#)).

Exhibit 23. Extract Messages (Selected messages only)

The screenshot shows the 'Extract Messages' panel with three radio button options: 'Extract to a file on local' (selected), 'Selected messages only', and 'All messages matching search criteria'. Below the options, it states '2 Message(s) will be extracted'. A table lists the messages with columns for #, Date, Time, Ctrl #, Sender, Receiver, Type, Length, and Terminal Id. At the bottom, there are 'Extract', 'Reset', and 'Cancel' buttons.

#	Date	Time	Ctrl #	Sender	Receiver	Type	Length	Terminal Id
1	10-06-2015	05:06:11	vfZIQ	EWKHQ	SCGPE	TRAIN76	11950	APPL0020
2	10-06-2015	05:02:48	zHGBi	PRTHU	FCOBM	SWETA00	438	APPL0120

3. The Extract to a file on local is selected by default and cannot be unselected. This allows you to save messages to your computer.
4. Either retain the default selection for downloading the **Selected messages only** or select **All messages matching search criteria** to include all messages in your query. A summary of download statistics is displayed ([Exhibit 24](#)).

Exhibit 24. Extract Messages (All messages matching search criteria)

The screenshot shows the 'Extract Messages' panel with three radio button options: 'Extract to a file on local' (selected), 'Selected messages only', and 'All messages matching search criteria'. Below the options, it states '37983 message(s) match your search criteria. All messages will be extracted in the background.' At the bottom, there are 'Extract', 'Reset', and 'Cancel' buttons.

5. With either desired option chosen, select the **Extract** button. The downloaded message is opened as a local file. Save as needed.

Retransmitting Messages

Note: Users cannot retransmit more than 500 messages at one time.

Retransmission allows users to retransmit messages that might have been lost or discarded during a specific time period.

To retransmit messages.

1. Following a successful search for messages, from the Search Results page ([Exhibit 15](#)), select one or more displayed messages (refer to Step 11 on page 12).
2. Select **Retransmit**. The Message Retransmission panel opens ([Exhibit 25](#)).

Exhibit 25. Message Retransmission

Message Retransmission

2 Message(s) will be retransmitted

#	Date	Time	Ctrl #	Sender	Receiver	Type	Length	Terminal Id

2	10-06-2015	05:02:48	zHGBi	PRTHU	FCOBM	SWETA00	438	APPL012O

10 50 100 250 500

3. Select **Retransmit** to retransmit the displayed messages. A message appears displaying the results of the retransmission ([Exhibit 26](#)).

Exhibit 26. Message Retransmission (success message)

Message Retransmission

2 messages out of 2 messages retransmitted

#	Date	Time	Ctrl #	Sender	Receiver	Type	Length	Terminal Id
1	10-06-2015	05:06:11	vfZIQ	EWKHQ	SCGPE	TRAIN76	11950	APPL002O
2	10-06-2015	05:02:48	zHGBi	PRTHU	FCOBM	SWETA00	438	APPL012O

10 50 100 250 500

4. Select **Cancel** to close the panel and return to the Search Results page.

My Queries

The My Queries function provides a list of the user's executed queries.

Exhibit 27. Query List

Tasks available on this page include:

- **View query details**— Except for the checkbox at the left, the entire row is a link the user can select to view details of the search (**Note:** Queries with Count = 0 have no link.) . Refer to [Viewing Messages](#) on page 14.
- [Delete Query](#)
- [Duplicate Query](#)
- [Remove Empty](#)

Delete Query

To delete a query:

1. Check the box beside the query and select **Delete**. A confirmation panel is displayed ([Exhibit 28](#)).

Exhibit 28. Confirm Delete Queries

2. If unsure about the deletion, select **No**. Otherwise, select **Yes** to delete the query.

Duplicate Query

To duplicate and reuse a query:

1. Check the desired query.
2. Select **Duplicate**. The Search Message page is displayed with the existing criteria (similar to [Exhibit 8](#)).
3. Adjust criteria as needed and select **Search**. Refer to [Exhibit 8](#).

Remove Empty

When a query brings back zero results, it still shows up in the Query List. To remove empty results:

1. Select the **Remove Empty** button. A confirmation message is displayed ([Exhibit 29](#)).

Exhibit 29. Confirm Remove Empty

2. If unsure about removing empties, select **No**. Otherwise, select **Yes** to remove the empties. The Query List page is refreshed and the empty queries are removed.

Aggregate Statistics

Once an hour, RMC compiles message statistics and saves them to the statistics table. Statistics are grouped into 10 minute increments by sender, receiver, message type, terminal ID, and direction (inbound or outbound relative to RMS). These statistics are available for viewing from the Aggregate Statistics page. The displayed aggregate statistics include data from within 365 days from the current day.

Viewing Aggregate Statistics

To view message aggregate statistics:

1. From the application menu, select **Messages>Aggregate Statistics**. The Aggregate Statistics page is displayed ([Exhibit 30](#)).

Exhibit 30. Aggregate Statistics

The screenshot shows the 'Aggregate Statistics' interface. It is divided into three main sections: 'Date & Time', 'Message Direction', and 'Message Info'.
 - **Date & Time:** Includes fields for 'From' (09-25-2015 00:00:00) and 'To' (09-25-2015 23:59:59), and a 'Range' dropdown set to 'Entire Day'.
 - **Message Direction:** Has two checked radio buttons: 'Inbound (ILOG)' and 'Outbound (OLOG)'.
 - **Message Info:** Includes 'Sender' and 'Receiver' dropdowns (both set to 'is exactly'), search boxes, a 'Message Type' search box, and an 'Include' dropdown.
 At the bottom, there are buttons for 'Back', 'Search', 'Reset', and 'Download'.

2. Enter the Date From and To fields.
3. Enter optional fields to narrow the output statistics:
 - a. Set Time Range (default is entire day). Refer to Step 2 on page 7.
 - b. Message Direction (Inbound (to Railinc)/Outbound (from Railinc)—default is both directions.
 - c. Sender (default is blank). Refer to Step 4 on page 8.
 - d. Receiver (default is blank). Refer to Step 4 on page 8.
 - e. Message Type (default is blank). Refer to Step 4 on page 8.
 - f. Include/Exclude: Use this to select whether to include or exclude the entered message types (default is include).
4. When criteria have been set, select **Search**. The Aggregate Statistics page is redisplayed with the summary results at the bottom.

Exhibit 31. Aggregate Statistics (showing summary results)

The screenshot shows the 'Aggregate Statistics' interface. At the top, there are filters for 'Date & Time' (From: 09-25-2015, To: 09-25-2015, Range: Entire Day) and 'Message Direction' (Inbound (ILOG) and Outbound (OLOG) are selected). Below these are 'Message Info' filters for Sender and Receiver (both set to 'is exactly'). A 'Search' button is present. The main content is a summary table:

Message Direction	Message Count	Average Size	Total Size
Inbound	71,544	1,009	72,214,266
Outbound	87,942	884	78,610,888
Total	159,486	945.695	150,825,154

At the bottom right, there are pagination options: 10, 50, 100, 250, 500.

If both directions had been selected, the data is initially divided into Inbound (to Railinc) and Outbound (from Railinc) counts. To view the breakdown of either set of data, select the **Inbound** or **Outbound** link. A breakdown sorted by Sender is displayed ([Exhibit 32](#)).

Exhibit 32. Aggregate Statistics (Inbound Details)

The screenshot shows the 'Aggregate Statistics' interface with 'Inbound (ILOG)' selected. The filters are the same as in Exhibit 31. The main content is a detailed table of inbound messages:

Sender	Receiver	Message Direction	MessageType	Terminal	Message Count	Average Size	Total Size
	CSXT0032	Inbound	EHMSD02		3	426	1,278
	RRDC	Inbound	TRAIN10		3	203	610
	RRDC	Inbound	TRAIN10		23	157	3,611
	RRDC	Inbound	EHMSD01		733	3,792	2,779,243
	RRDC	Inbound	EHMSD01		611	3,927	2,399,668
	RRDC	Inbound	EHMSD01		586	4,083	2,392,913
	RRDC	Inbound	EHMSD01		563	4,187	2,357,244
	RRDC	Inbound	EHMSD01		369	4,231	1,561,379
	RRDC	Inbound	EHMSD01		284	4,278	1,215,063
	RRDC	Inbound	EHMSD01		236	4,293	1,013,050
	RRDC	Inbound	EHMSD01		199	4,362	867,977
	RRDC	Inbound	EHMSD01		151	4,352	657,220
	RRDC	Inbound	EHMSD01		152	4,350	661,194
	RRDC	Inbound	EHMSD01		94	4,338	407,761
	RRDC	Inbound	EHMSD01		94	4,444	417,759
	RRDC	Inbound	EHMSD01		130	4,475	581,783
	RRDC	Inbound	EHMSD01		67	4,435	297,134
	RRDC	Inbound	EHMSD01		70	4,379	306,540
	RRDC	Inbound	EHMSD01		74	4,452	329,454
	RRDC	Inbound	EHMSD01		60	4,427	265,605
	RRDC	Inbound	EHMSD01		27	4,376	118,142
	RRDC	Inbound	EHMSD01		27	4,499	121,483
	RRDC	Inbound	EHMSD01		35	4,454	155,903

At the bottom right, there are pagination options: 10, 50, 100, 250, 500.

The breakdown is alphabetic by Sender. To view actual messages, select the link for a Sender. The Aggregate Statistics for that selected sender are shown ([Exhibit 33](#)). Use the **Back** button to go back and select a different direction.

Exhibit 33. Message Summary Results (Inbound Details for one Sender)

Use the **Back** button to go back and select a different Sender.

Note: Date links open a page similar to Search Results to allow the user to view details of individual messages (refer to [Exhibit 15](#)).

Downloading Aggregate Statistics

Execute a search for statistics as described in [Viewing Aggregate Statistics](#) on page 21. When the Summary is displayed, select **Download**. A dialog box opens to allow either saving or directly opening the extracted information. The downloaded data is the raw data from the statistics table, not the data shown on the screen (as if the user drilled down to the lowest level). It can be saved in CSV format and opened by MS Excel.

See [Downloading Messages](#) on page 17.

Monitoring

The Monitoring menu allows users to manage notifications.

Exhibit 34. Monitoring Menu

[Exhibit 35](#) describes the task available on the Messages menu.

Exhibit 35. Monitoring Menu Items and Descriptions

Menu Item	Description
Notifications	Allows the user to manage notifications for messages.

Notifications

RMC can be configured to send alerts via e-mail when events occur. RMC currently supports volume events in production. It also supports message trends, that is, if the volume of messages is greater or lesser than a previous time period.

Notifications can be especially useful when establishing messaging with a new trading partner as part of the testing process. When the test period is successfully completed and message counts verified, the notification can be disabled or deleted.

To work with notifications:

1. In RMC, select **Monitoring>Notifications**. The Message Notifications page is displayed ([Exhibit 36](#)).

Exhibit 36. Message Notifications

The page shows existing notifications for the user. Tasks that can be performed include:

[View](#)—View notification details.

[Add](#)—Add a new notification.

[Edit](#)—Change an existing notification.

[Delete](#)—Remove a notification.

[Undelete](#)—Brings back any previously deleted notifications.

[Clear Alerts](#)—Clear alerts generated by notifications.

Viewing Notifications

To view details of a notification:

1. On the Message Notifications page ([Exhibit 36](#)), select the hyperlinked notification name that you want to view. The View Notification page is displayed ([Exhibit 37](#)).

Exhibit 37. View Notification

The screenshot shows the 'View Notification' interface. At the top, the notification name is 'My Notification' and the email is 'james.anton@railinc.com'. Below this are search filters for 'Sender' (set to 'is exactly'), 'Receiver' (set to 'is exactly'), and 'Message Type'. The 'Inbound' radio button is selected. Under 'Message Volume', 'Over' is selected with a value of '0'. The 'Send alert when the number of messages matching the above query is' section has 'Any' selected with a value of '1' and a 'Period' dropdown set to 'Hour'. Other options include 'The First' (1 Day(s) of the month) and 'The Last' (1 Day(s) of the month). A 'Notes' field is empty. At the bottom, there is an 'Exclude Notifications' checkbox (unchecked) and a 'Show All' button. The bottom right corner contains 'Edit', 'Save', and 'Cancel' buttons.

2. As needed, the shown notification details can be edited (see [Viewing/Editing Notifications](#)).

Adding Notifications

To add a notification:

1. On the Message Notifications page ([Exhibit 36](#)), select **Add**. The Add Message Notification Details page is displayed ([Exhibit 38](#)).

Exhibit 38. Add Notification (with default settings)

The screenshot shows the 'Add Notification' form with the following details:

- Name:** My Notification
- Email:** james.anton@railinc.com
- Sender:** is exactly [] Q
- Receiver:** is exactly [] Q
- Message Type:** [] Q
- Direction:** Inbound Outbound
- Alert Type:** Message Volume Message Trend
- Threshold:** Under Over [0] Messages for
- Alert Trigger:** Send alert when the number of messages matching the above query is
- Frequency:** Any [1] Hour Period
- Day(s) of the month:** The First [1] Day(s) of the month
- Day(s) of the month:** The Last [1] Day(s) of the month
- Notes:** []
- Exclude Notifications:** Show All [0]
- Buttons:** Save, Cancel
- Help:** [?] Help

2. Configure the notification. For help with configuration, select the **Help** link. A help panel with complete instructions opens ([Exhibit 39](#)).

Note: The Help panel has radio buttons in the center for Message Volume and Message Trends. By default, help is shown for Message Volume. For help with message trending configuration, select the Message Trends radio button. The instructions are modified.

Exhibit 39. Notification Help

Message Notification Help

Message notifications alert you when message volumes are lesser or greater than an expected threshold. For message volume notifications, the threshold is an absolute message count. For message trend notifications, message volumes are compared to a previous period of the same duration. In that case, the threshold is in terms of percent.

Message Query

The top section contains two mandatory fields, the name of the notification and the email address. All other fields in this section are optional and define your query.

1. Give your notification a name. The name is included in the subject line of alerts so try to make it descriptive.
2. Provide one or more valid email addresses. Addresses must be separated with semi-colons, for example, abc@mycompany.com; xyz@mycompany.com
3. Optionally specify your query, including the sender, receiver, and message types. You can enter multiple message types, separated by commas (.). Each message type can be abbreviated; a wildcard character is automatically appended to each message type.
4. Specify whether you are interested in messages you send or messages you receive.

Message Volume **Message Trend**

Interval Periods

For each interval period, your query is automatically executed to obtain the message volume. There are three frequencies of interval periods:

- **Any** - Interval periods run consecutively. Periods can be minutes (minimum 15), hours, days, weeks, or months (maximum 1 month). For example, if you specify a 2-hour period, your query will run every two hours and an alert will be sent if the volume is below or above the threshold.
- **First** - Interval periods run monthly and cover the first N days of the month. For example, if you specify the first 7 days, your query will run in the early morning hours on the 8th day of every month.
- **Last** - Interval periods run monthly and cover the last N days of the month. For example, if you specify the last 7 days, your query will run in the early morning hours on the 1st day of every month and cover the previous 7 days..

Volume Thresholds

Volume thresholds are in terms of absolute message counts.

1. Specify whether you want an alert if the message count is over or under the threshold
2. Specify the threshold value. For example, you may want to be alerted if waybill messages you send for any single day is greater than 1,000.

Close

This panel remains open until closed (select **Close** or **X**).

Note: Make the name chosen for the notification something that indicates the purpose of the notification.

3. When the fields are completed (name and e-mail address are mandatory), select **Apply** to save the new notification and remain on the details page. Select **OK** to save the new notification and return to the Message Notifications page. The new notification is added to the list of notifications.

RMC checks each specified interval period. It runs the query specified and obtains a message count. If that count is under or over the threshold, depending on selected configuration, RMC sends an alert.

Viewing/Editing Notifications

To view or edit RMC notifications:

1. On the Message Notifications page ([Exhibit 36](#)), and select the link for the notification, or select the radio button beside the notification and select **Edit**. The Message Notification Details page is displayed (similar to [Exhibit 38](#)).
2. As needed, make modifications to the displayed notification details.

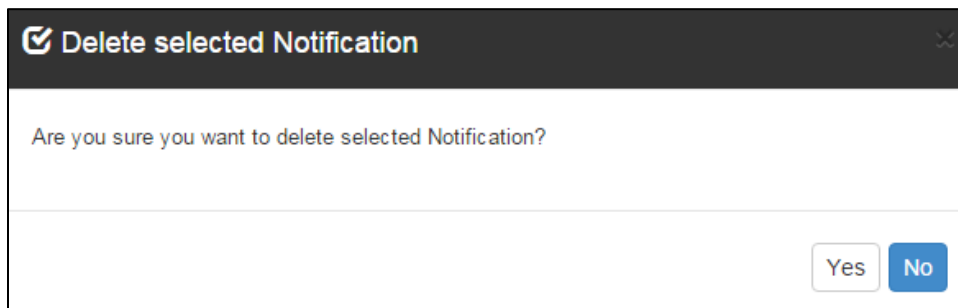

3. Select **Apply** to save changes and to remain on the details page. Select **OK** to save notification changes and return to the Message Notifications page.

Deleting Notifications

To delete RMC notifications:

1. On the Message Notifications page ([Exhibit 36](#)), select the radio button beside the notification and select **Delete**. A confirmation panel is displayed ([Exhibit 40](#)).

Exhibit 40. Delete Notification Confirmation

The dialog box has a dark header with a checkmark icon and the text "Delete selected Notification". Below the header, the main content area contains the question "Are you sure you want to delete selected Notification?". At the bottom right, there are two buttons: "Yes" (light blue) and "No" (dark blue).

2. If unsure about the deletion, select **No**. Otherwise select **Yes**. The panel closes and the Message Notification page is refreshed and the notification is removed.

Undeleting Notifications

To undelete previously deleted RMC notifications:

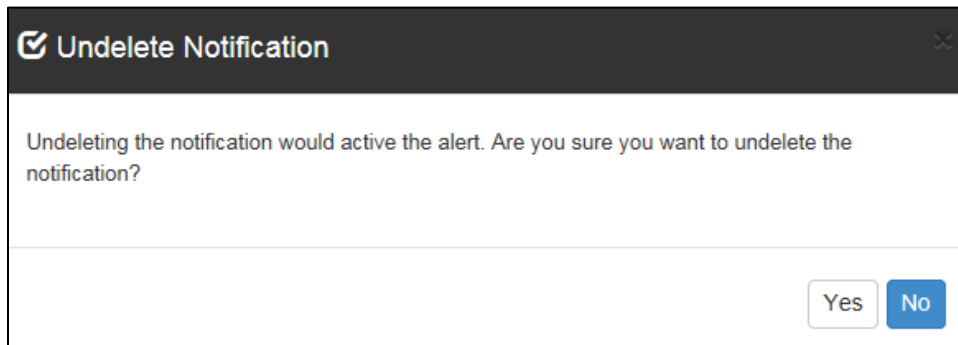

1. On the Message Notifications page ([Exhibit 36](#)), select the show history check box to display any previously deleted notifications. The notifications appear with a line through the listing ([Exhibit 41](#)).

Exhibit 41. Message Notifications (with deleted notification selected)

Message Notifications											
<input type="button" value="+ Add"/> <input type="button" value="Edit"/> <input type="button" value="Copy"/> <input type="button" value="Delete"/> <input type="button" value="Undelete"/> <input type="button" value="Clear Alerts"/> <input checked="" type="checkbox"/> Show History ⓘ											
	Notification	Type	Status	Sender	Receiver	MessageType	ThresholdType	Threshold	Alerts	Last Alert	Notes
<input type="radio"/>	My Notification	volume	Active				0	0	290	10-02-2015 08:43:53	
<input checked="" type="radio"/>	My Notification2	volume	Inactive				0	0	0	N/A	

2. Select **Undelete**. A confirmation message is displayed ([Exhibit 42](#)).

Exhibit 42. Undelete Notification

3. If unsure about the undeletion, select **No**. Otherwise select **Yes**. The panel closes and the Message Notification page is refreshed and the line indicating that the notification had been deleted is removed. The notification can now be viewed and edited.

Clearing Notification Alerts

To clear RMC notification alerts (reset the counter to zero for a specific alert):

1. On the Message Notifications page ([Exhibit 36](#)), select the radio button beside the notification and select **Clear Alerts**. The Alerts counter is set to zero.

Routing

Exhibit 43. Routing Menu

Exhibit 44 describes the tasks available on the Routing menu.

Exhibit 44. Routing Menu Items and Descriptions

Menu Item	Description
Company List	Allows the user to view trading partner routing information.

Company List

To view company routing profiles:

1. In RMC, select **Routing>Company List**. The Primary Company Details page is displayed ([Exhibit 45](#)).

Exhibit 45. Primary Company Details

The following tabbed information might be available for the Owner:

- **Managed Companies** (default tab)—displays existing managed companies (select a link of a Company ID to view trading partner details and routing settings). Refer to the Managed Company Details page ([Exhibit 46](#)).
- **In Terminals**—Shows the owner’s list of inbound terminals
- **Out Terminals**—shows the owner’s list of outbound terminals

- **Edifact**—Shows the owner’s EDIFACT partners, if any exist
- **Routes**—shows the owner’s message routing. Owner’s message routing acts as a default to its trading partners’ message routing.
- **Envelopes**—show the owner’s envelope preferences. Owner’s envelope preferences act as a default to its trading partners’ envelope preferences.
- **Msg Priorities**—shows the owner’s message priorities. Owner’s message priorities act as a default to its trading partners’ message priorities.

Note: No actions are available on these tabs, unless the user has Routing Profile Edit permission. See [My Permissions](#) on page 37.

Exhibit 46. Trading Partner Details (for selected partner link)

2. No actions are available on this page or its tabs, unless the user has Routing Profile Edit permission. See [My Permissions](#) on page 37 .

The following tabbed information might be available for the Trading Partner:

- Details
- Routes
- Envelopes
- Msg Priorities
- Transformations

3. Select **Cancel** to return to the Primary Company Details page.

Tools

Exhibit 47. Tools Menu

[Exhibit 48](#) describes the tasks available on the Tools menu.

Exhibit 48. Tools Menu Items and Descriptions

Menu Item	Description
Message Type Lookup	Allows the user to search for message types (Exhibit 49).
Trading Partner Lookup	Allows the user to look up trading partners (Exhibit 51).
My Permissions	Allows the user to view and request RMC permissions (Exhibit 54).

Message Type Lookup

To look up message types:

1. In RMC, select **Tools>Message Type Lookup**. The Message Type Lookup pop-up opens ([Exhibit 49](#)).

Exhibit 49. Message Type Lookup

 A screenshot of a 'Message Type Lookup' pop-up window. The window has a title bar that says 'Message Type Lookup'. Below the title bar is a search area with a label 'ID:' followed by a text input field and a blue button labeled 'Q Search'. At the bottom right of the window is an orange button labeled 'Close'.

2. Enter the ID of a message type in the available ID input field.
 - a. Partial input is allowed.
 - b. Wildcards (%) are allowed. Refer to Step [2.b](#) on page 34.
3. Select **Search**. Search results are displayed ([Exhibit 50](#)).

Exhibit 50. Message Type Lookup (Search Results)

Message Type Lookup

ID:

MessageType	Envelope	AlternateType	AlternateEnvelope	Desc

SW417	I	SWAYB00	T	RAIL CARRIER WAYBILL INTERCHANGE

10 25 50 100

Trading Partner Lookup

When adding a new trading partner, a user needs to look up the partner to determine whether the partner exists in RMC. A lookup can also verify correct company name spelling or the company's ID.

To look up trading partners:

1. In RMC, select **Tools>Trading Partner Lookup**. The Managed Company Lookup panel opens ([Exhibit 51](#)).

Exhibit 51. Managed Company Lookup

Managed Company Lookup

Please specify either a partial ID or partial name

ID: or Name:

2. Enter the ID or Name of a trading partner in the available input fields.
 - a. Partial input is allowed.
 - b. Wildcards (using a percent sign %, *not* an asterisk *) can be used to confine the search, or to refine it in either or both fields. For example:
 - **%BB%** in the ID field produces a list with IDs beginning, ending, or containing the letters BB together.
 - **%OIL%** in the Name field produces a list of all IDs that have OIL somewhere in their name.

- **%BB%** in the ID field and **%OIL%** in the name field produces a list of partners with IDs beginning, ending, or containing the letters BB together, and that also have the word OIL in their name.
 - **%R%J%** in the ID field produces a list with IDs containing both characters R and J (in that order) at the beginning, end, middle, or separated by other characters.
3. Select **Search**. Search results are displayed ([Exhibit 52](#) and [Exhibit 53](#)).

Exhibit 52. Managed Company Lookup (ID search results)

The screenshot displays the 'Managed Company Lookup' interface. At the top, there is a search bar with the instruction 'Please specify either a partial ID or partial name'. Below this, there are two input fields: 'ID:' with the value 'RAIL' and 'or Name:' with an empty field. A 'Search' button is located to the right of the 'or Name:' field. Below the search bar is a table with three columns: 'Id', 'Name', and 'Interconnect Owner'. The table is currently empty. At the bottom of the table, there are pagination controls showing '1' and '2' with arrows, and a dropdown menu with options '10', '25', '50', and '100'. A 'Close' button is located at the bottom right of the interface.

Id	Name	Interconnect Owner
----	------	--------------------

Exhibit 53. Trading Partner Lookup (Name search results)

Managed Company Lookup

Please specify either a partial ID or partial name

ID: or Name:

Id	Name	Interconnect Owner
----	------	--------------------

« 1 2 3 4 5 6 7 ... 10 »

10 25 50 100

No actions are available on these results panels.

4. Select **Close** to exit the lookup.

My Permissions

Note: Permissions can only be granted by the Railinc RMC application administrator, and requesting permission does NOT imply automatic approval.

To manage permissions:

1. In RMC, select **Tools>My Permissions**. The My Permissions panel opens ([Exhibit 54](#)). The companies listed on the left of the page represent all the companies that you could request access to and those on the right are all the companies that have already accepted requests for access.

Exhibit 54. My Permissions

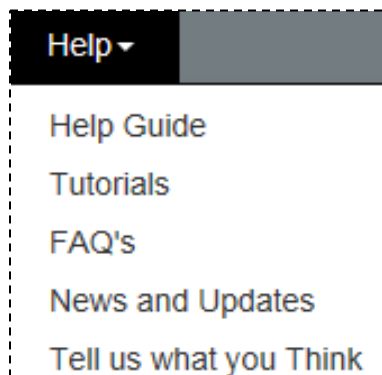

The screenshot displays the 'My Permissions' interface. At the top, user information is shown: Name: Namita Sahajwani, Employer: RAILINC CORPORATION, Title: Business analyst, Status: Active, Phone: 9196515064, and Email: namita.sahajwani@railinc.com. Below this, there are two main panels. The 'Company List' panel on the left includes a 'Filter Primary Companies' input field and a list of companies, each with a dropdown arrow. The 'User Companies' panel on the right is a table with columns for 'Company ID' and 'Status', showing a list of companies with a status of 'Active'. At the bottom, there are 'Add' and 'Remove' buttons, and a 'Send Request' button with a checkmark and a 'Close' button.

2. The drop arrow next to each listed company can be selected to reveal full details of the company, including if they manage multiple other Company IDs.
3. The Filter Primary Company input field can be used to filter the number of displayed Company IDs.
4. To **add** a request to access another company, select its Company ID from the list on the left and then select the **Add** button. The Company ID appears on the left with a status of “initiated”. To submit the request for permission, select the **Send Request** button. A message appears stating that your request has been sent and the status changes to “pending.” An email is sent to the indicated company for their review and approval.
5. When in the “initiated” status, a Company ID can be removed from the list on the right prior to sending the request. To **remove** the Company ID, select it from the list on the right and then select the **Remove** button. The company reappears on the list on the left.

Help

When the user selects Help, the Help menu opens ([Exhibit 55](#)).

Exhibit 55. Help Menu

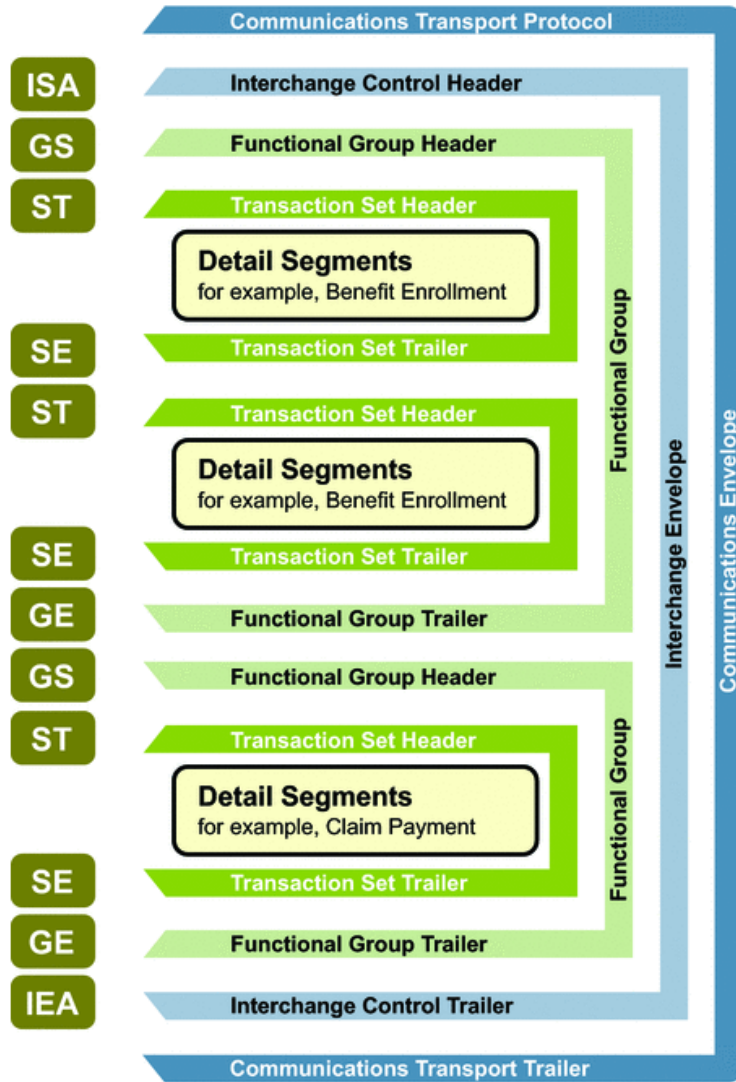

- Select **Help Guide** to open the RMC User Guide in a new window. When finished using the Guide, close the extra Window.
- Select **Tutorials** to access tutorials on how to perform the functions of RMC.
- Select **FAQs** to access a list of frequently asked questions and answers.
- Select **New and Updates** to review details on upcoming product releases.
- Select **Tell Us What You Think** to initiate an email to send to Railinc. Use this email to submit suggestions for improvements or general comments about RMC.

Appendix A – Messaging Details

This appendix provides an overview of the parts of a messages that can be viewed using RMC.

Exhibit 56. X12 997 (Functional Acknowledgment) Segment Table

Interchange Envelopes (ISA/IEA)

The Interchange Envelope, often referred to as the “outer envelope,” is the wrapper for all the data to be sent in one transmission. It can contain multiple Functional Groups. This characteristic means that transactions of different types can be included in the Interchange Envelope, with each type of transaction stored in a separate Functional Group.

The Interchange Envelope is defined by the header and trailer; the Interchange Control Header (designated ISA) appears at the beginning, and the Interchange Control Trailer (designated IEA) appears at the end.

As well as enveloping one or more Functional Groups, the ISA and IEA segments include:

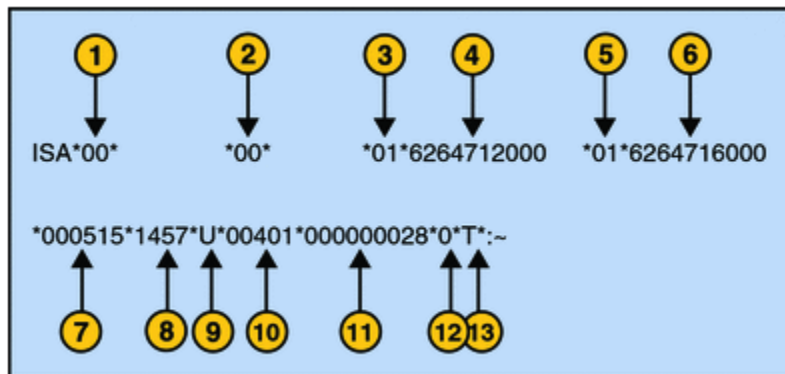

- Data element separators and data segment terminator
- Identification of sender and receiver
- Control information (used to verify message was correctly received)
- Authorization and security information, if applicable

The sequence of information transmitted is:

- ISA
- Optional interchange-related control segments
- Actual message information, grouped by transaction type into Functional Groups
- IEA

See [Exhibit 57](#) and [Exhibit 58](#)

Exhibit 57. Example of an Interchange Header (ISA)

The following list describes the ISA segments shown in [Exhibit 57](#):

1. Authorization Information Qualifier
2. Security Information Qualifier
3. Interchange ID Qualifier
4. Interchange Sender ID
5. Interchange ID Qualifier
6. Interchange Receiver ID
7. Date
8. Time
9. Repetition Separator
10. Interchange Control Version Number

11. Interchange Control Number
12. Acknowledgment Requested
13. Usage Indicator

Exhibit 58. Example of an Interchange Trailer (IEA)

Functional Groups (GS/GE)

Functional Groups, often referred to as the “inner envelope,” are made up of one or more Transaction Sets, all of the same type, which can be batched together into one transmission. The Functional Group is defined by the header and trailer segments.

The Functional Group Header (designated GS) segment appears at the beginning, and the Functional Group Trailer (designated GE) segment appears at the end. Many Transaction Sets can be included in the Functional Group, but all local transactions must be of the same type.

Within the Functional Group, each Transaction Set is assigned a functional identifier code, which is the first data element of the header segment. The Transaction Sets that constitute a specific Functional Group are identified by this functional ID code.

The GS segment contains:

- Functional ID code (the two-letter transaction code; for example, PO for an 850 Purchase Order, HS for a 270 Eligibility, Coverage, or Benefit Inquiry) to indicate the type of transaction in the Functional Group
- Identification of sender and receiver
- Control information (the Functional Group control numbers in the header and trailer segments must be identical)
- Date and time

The GE segment contains:

- Number of Transaction Sets included
- Group control number (originated and maintained by the sender)

Exhibit 59. Example of a Functional Group Header (GS)

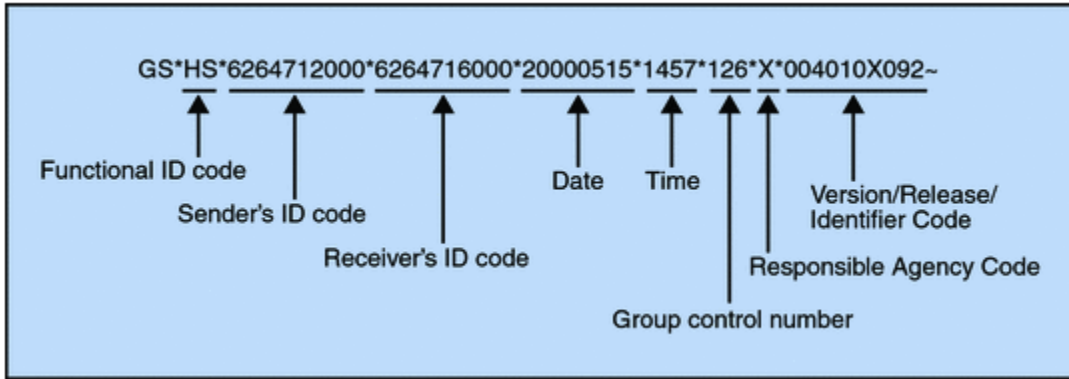

Exhibit 60. Example of a Functional Group Trailer (GE)
